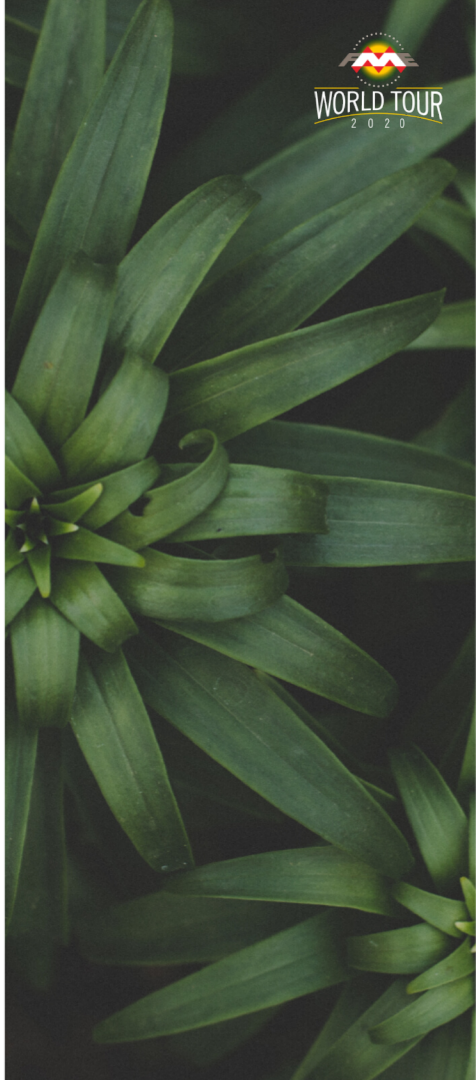
Darren Fergus

FME Desktop Certified Professional and Trainer

Introduction

- **Who am I and what do I do?**
- **There will be 3 Topics that we will be covering:**
  - Importance of Versioning - no server licence worries and those “Autosave gotchas”!
  - FME and unconventional thinking - Managing AWS FME Server instance on a budget (no need for Elastic IP’s with FME and Command Line)
  - Super cool AWS Rekognition Service – It’s all fun and games or is it?



The Importance of Versioning – FME Server

- **The Why?**
- Reducing the risk to production is fundamental
  - Production, UAT and Dev Model

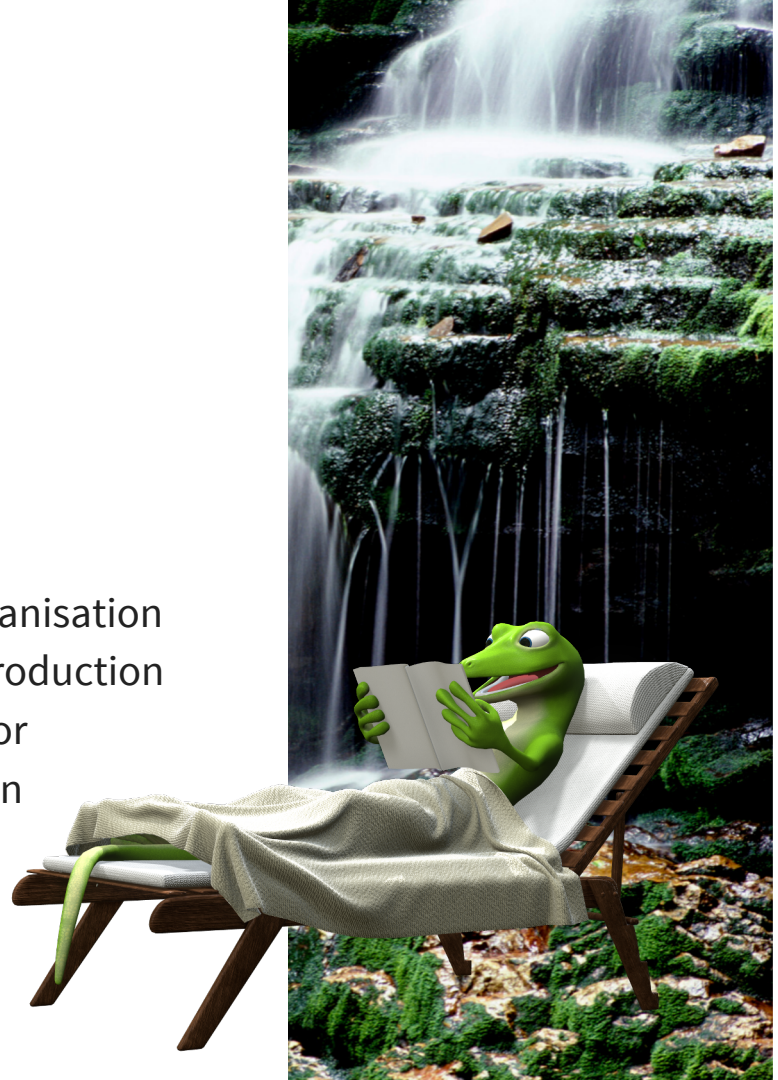
  This still only goes part way and if you don't have?
- Welcome to issue 101 for most organisations, a mind field awaits:
  - Accidently Killing a workspace – Mitigation relies on an individuals best practice
  - Introducing a bug to a Workspace – Testing might be fine, but is production?
  - The, which workspace version nightmare - A common theme across organisations with multiple publishers with limited standards and controls in place

Versioning Cont.

- Desktop and Server Make it easy for version control
  - Publish, Re-Publish and Download
    - Commit a workspace (Versioned!)
    - Download a copy (Big benefits)

    No Licence – Don’t Worry
- **FME Server with Versioning enabled** provides an organisation the perfect risk mitigation tool for dealing with the introduction of human errors that go on to break a workspace and or potentially risk all sorts of issues within an organisation

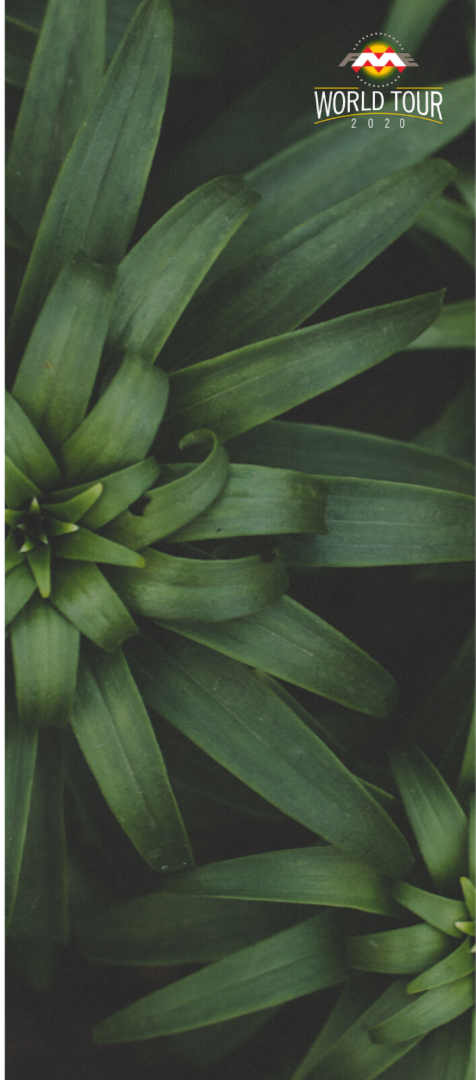
  - Without Versioning - it’s HELL ON EARTH!



FME and Unconventional Thinking

- **The Problems** (The quirks of FME Server on AWS)
  - Server IP changes every time you re-boot
    - To Elastic IP or not?
  - FME Server Firewall Configuration (Which Ports?)
    - To import/export a firewall policy or not – Maybe not

LIVE DEMO



AWS Rekognition Service – Lets Play!

Live Demo

General points to consider - New transformer fun:

- Do you require a 3rd party registration?
  - AWS recognition, requires a AWS account and requires you to have setup a USER with associated access policy – Token Generated.
  - Will it just work?
    - Yes – But this is just one piece of the puzzle in a long line of workspace development to make it work the way you need it to.

Be truly empowered with the power of FME!

FME WORLD TOUR 2020

Thank you!
