

Some Lesser-Used FME Data Wrangling Techniques

Michael Oberdries
Locus Presentation

This presentation is a bit of a reflection of some of the project work I have been involved with over the last year ... and an opportunity to highlight some “lesser-used” FME techniques which may be of wider-interest to this audience

CONNECT. TRANSFORM. AUTOMATE.

Look-ahead / Look-behind Data Parsing

Look-ahead/Look-behind Data Parsing

FME is **feature-based** meaning each feature within a stream of data is processed separately

The advanced options is the **AttributeManager** and the **AttributeCreator** transformer parameters now allow us to access the attributes of adjacent features in a stream of data ...

CONNECT. TRANSFORM. AUTOMATE.

Look-ahead/Look-behind Data Parsing

AttributeManager Parameters

Transformer

Transformer Name: AttributeManager

Advanced: Attribute Value Handling

Substitute Missing, Null and Empty by: No Substitution

Default Value:

Enable Adjacent Feature Attributes

Number of Prior Features: 0

Number of Subsequent Features: 0

Attribute Actions

Input Attribute	Output Attribute	Attribute Value	Action
	<Add new Attribute>		

CONNECT. TRANSFORM. AUTOMATE.

Look-ahead/Look-behind Data Parsing

▼ Enable Adjacent Feature Attributes

Number of Prior Features: ▼

Number of Subsequent Features: ▼

Two red arrows point to the input fields for 'Number of Prior Features' and 'Number of Subsequent Features'.

- Attributes of prior features are referenced as `feature[-1].AttrName`, `feature[-2].AttrName`
- Attributes of subsequent features are referenced as `feature[+1].AttrName`, `feature[+2].AttrName`
- Attributes of the currently processed feature are accessed directly without a prefix

CONNECT. TRANSFORM. AUTOMATE.

Look-ahead/Look-behind Data Parsing

The ability to be able to access the attributes of adjacent features is particularly useful when working with data where **order** and **sequence** of a stream of data is important

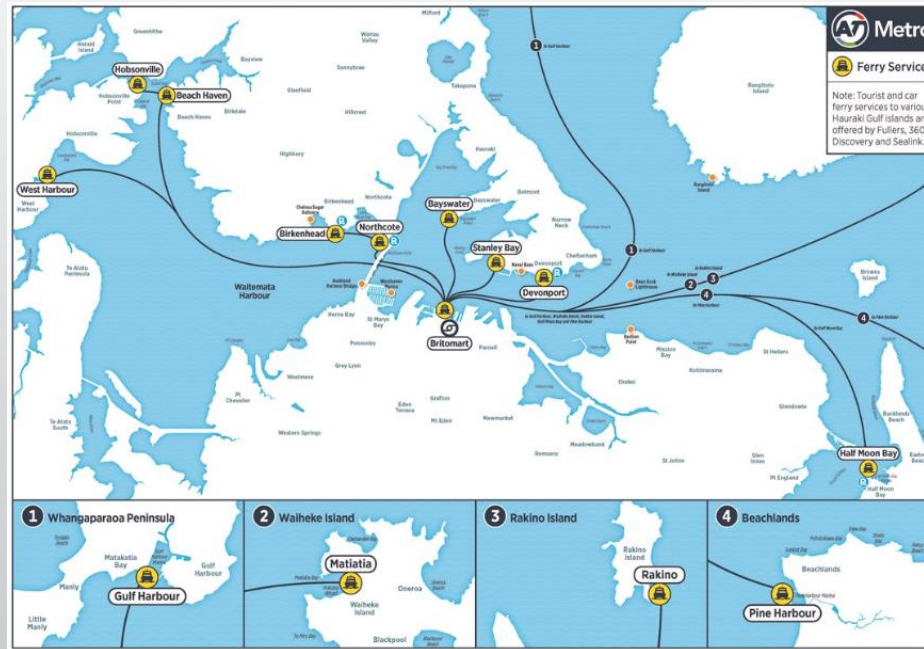

- Time-series data
- Real-time data streaming
- Network data (routes and traces)
- Hierarchical data (tree structures)
- Sorted data

Don't forget the Format Attributes

Don't forget the Format Attributes

Format Attributes are built in FME attributes that you can “expose” and use to control features

Format attributes are specific to a data format schema but can be remapped between schema formats

The AutoCAD DWG/DXF format carries forward **533** separate format attributes and attributes-lists

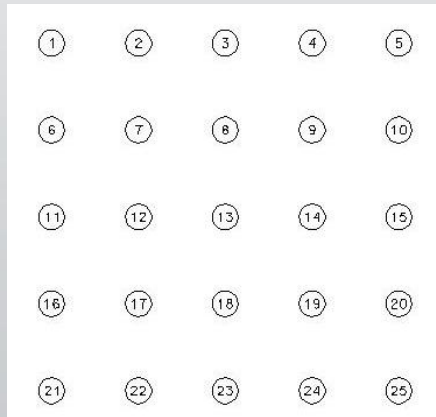

CONNECT. TRANSFORM. AUTOMATE.

Don't forget the Format Attributes

Text label justifications is handled differently in different GIS

Format Attributes capture these values

Formats	Smallworld	MicroStation DGN	AutoCAD DWG/DXF	Intergraph GeoMedia	ESRI E00/Coverage	ESRI GeoDatabase
Format Attributes	<i>sworld_vert_just</i> <i>sworld_horiz_just</i>	<i>igds_justification</i>	<i>autocad_justification</i>	<i>fm0_justification</i>	<i>e00_text_just</i>	<i>geodb_v_align</i> <i>geodb_h_align</i>
Diagram Position						
1	5,1	0 (or 3)	autocad_top_left	10	7	top, left
2	5,2					
3	5,3	6	autocad_top_middle	8	8	top, center
4	5,4					
5	5,5	12 (or 9)	autocad_top_right	9	9	top, right
6	4,1					
7	4,2					
8	4,3					
9	4,4					
10	4,5					
11	3,1	1 (or 4)	autocad_middle_left	2	4	center, left
12	3,2					
13	3,3	7	autocad_middle_middle	0	5	center, center
14	3,4					
15	3,5	13 (or 10)	autocad_middle_right	1	6	center, right
16	2,1					
17	2,2					
18	2,3					
19	2,4					
20	2,5					
21	1,1	2 (or 5)	autocad_bottom_left	6	1	bottom, left
22	1,2					
23	1,3	8	autocad_bottom_middle	4	2	bottom, center
24	1,4					
25	1,5	14 (or 11)	autocad_bottom_right	5	3	bottom, right

Coverage Analysis of Spatial Clusters

Coverage Analysis of Spatial Clusters

Waldo Tobler's 1st Law of Geography states ...

"... everything is related to everything else, but near things are more related than distant things."

In the GIS World, Tobler's 1st Law often manifests itself as a **spatial cluster** ... the location of statistically significant hot spots, cold spots and spatial outliers

CONNECT. TRANSFORM. AUTOMATE.

Coverage Analysis of Spatial Clusters

Probably the earliest known example of the insights afforded by cluster mapping is **John Snow's 1854 map of cholera cases** in London.

Snow plotted cholera infections and deaths on a map and was able to show that they were clustered around the 'Broad Street' water pump ... he didn't know the cause, but removed the pump's handle and the cascade of cases was halted

CONNECT. TRANSFORM. AUTOMATE.

Coverage Analysis of Spatial Clusters

FME Demo ...

It turns out that Snow's original datasets can be found online

CONNECT. TRANSFORM. AUTOMATE.

The logo features the letters 'FME' in a stylized, white, blocky font with a dotted circular border above it. Below this, the words 'WORLD TOUR' are written in a white, serif font, and the year '2018' is written in a smaller, white, sans-serif font below that.

FME
WORLD TOUR
2018
